Exercise 4: Launching Web Applications using App Engine Tools

Aim:

To launch and run a web application locally using Google App Engine tools (Flask) and verify it in a browser.

Procedure:

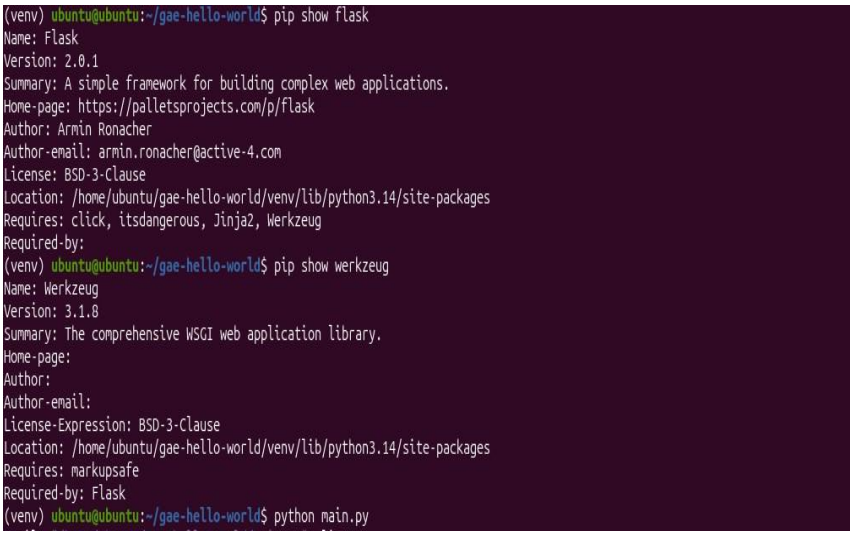

Step 1: Upgrade Flask and Werkzeug

pip install --upgrade flask werkzeug

This upgrades Flask and its dependencies (Werkzeug, blinker, etc.) in the virtual environment.

Step 2: Verify Installed Package Versions

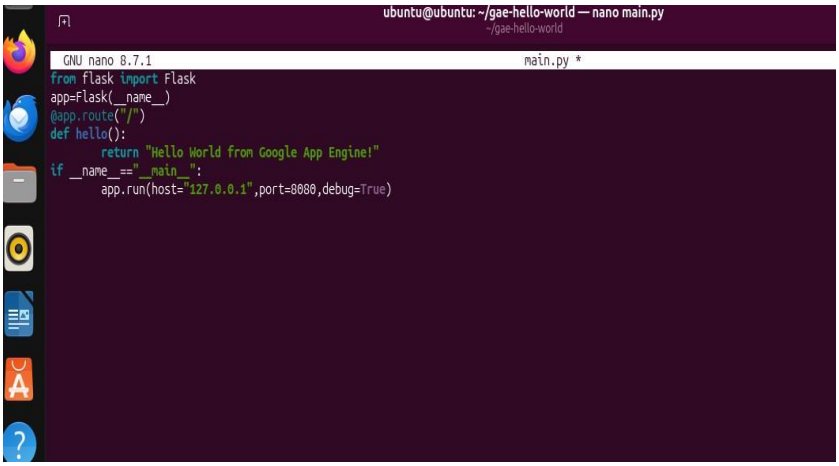

pip show flask
pip show werkzeug

Step 3: Review Application Code (main.py)

main.py defines a simple Flask route that returns a Hello World message:

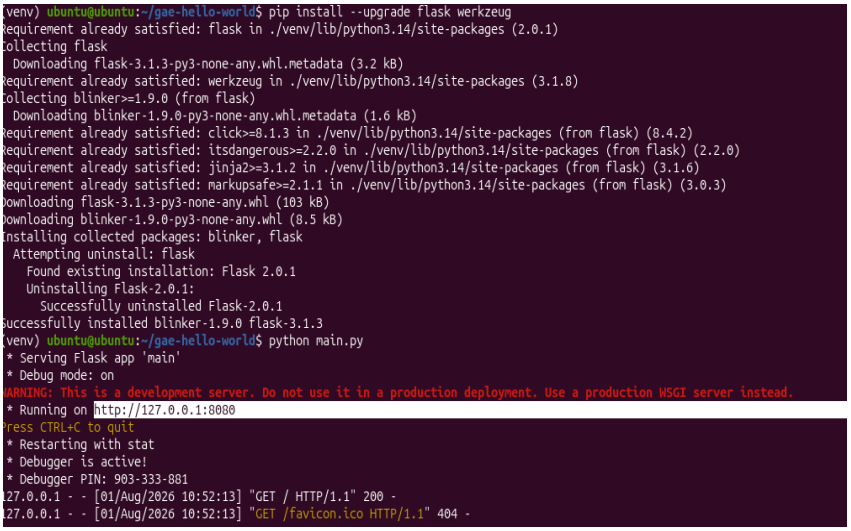

231501035
DHANU SHREE S

Step 4: Run the Application

python main.py

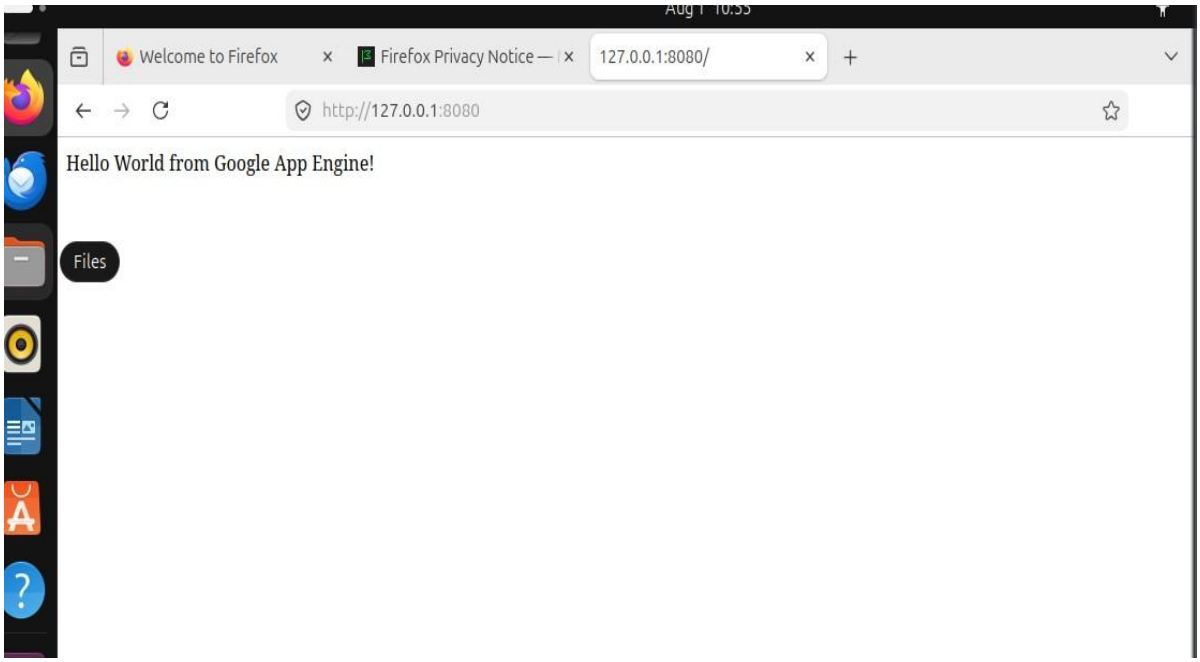

Flask starts the development server on http://127.0.0.1:8080 with debug mode enabled.

Output:

The application was accessed from the browser at 127.0.0.1:8080, confirming successful deployment:

231501035
DHANU SHREE S

Result:

Thus, the Flask-based web application was successfully launched and tested locally using Google App Engine tools.
